Description

KOBOLD rotating vane flowmeters series DRH are used for measuring and monitoring low viscous liquids. Series DRH flowmeters are working according the well-known rotating vane principle. A magnet fitted in the vane and hermetically sealed from the medium transfers non-contacting the rotary motion to a Hall-effect sensor mounted in the housing. The sensor converts the rotary motion which is proportional to the flow to a frequency signal. A series-connected electronics unit converts the signal to an analogue output, limit contacts or display. These devices can be adapted to prevailing plant conditions with the 360° rotatable screw connections.

Fields of Application

- Cooling water monitoring
- Agricultural machinery
- PCB board industry
